MRI Cardiac

- Cardiac MRI (Magnetic Resonance Imaging) is a powerful diagnostic tool with several merits and demerits.

HERE'S A SUMMARY: MERITS

- **Detailed Imaging:** Provides highly detailed images of the heart's anatomy and function, allowing for accurate evaluation of conditions like heart failure, congenital heart disease, and myocardial scarring.
- **Non-invasive:** Does not involve radiation exposure, making it safer for patients, especially those requiring repeated imaging.
- **Functional Assessment:** Can measure blood flow, heart muscle performance, and detect scarring or damage, offering precise information on the heart's pumping ability.
- **Wide Range of Diagnoses:** Useful for diagnosing various heart conditions, including cardiomyopathy, coronary artery disease, heart valve diseases, and myocarditis.
- **Detection of Myocardial Fibrosis:** Can detect myocardial fibrosis (scarring of the heart muscle), which is critical for assessing the severity of certain heart diseases and planning treatment strategies.

📍 - 29 & 21 Shanti Nagar, Above Canara Bank, Shri Nagar Ext. Khajarana Road, Indore (M.P.)
